

# The Rise of the Working Married Woman: Evidence from U.S. Teachers in the 1930s

Amy Kim and Carolyn Tsao

September 28, 2023

# Motivation

- Married women drove  $\uparrow$  women's labor force participation (LFP) through 1900s.

# Motivation

- Married women drove  $\uparrow$  women's labor force participation (LFP) through 1900s.

# Motivation

- Key barrier to women's LFP before 1950's: **“marriage bars”**
  - Widespread ban on employment of married women
  - Enforced by over half of surveyed firms in 1931 Goldin 1988
  - In 1950's, demand for labor rose  $\Rightarrow$  marriage bars were lifted.
- Limited evidence on **short/long-run effects** of lifting marriage bars.

# Motivation

- Key barrier to women's LFP before 1950's: **“marriage bars”**
  - Widespread ban on employment of married women
  - Enforced by over half of surveyed firms in 1931 Goldin 1988
  - In 1950's, demand for labor rose  $\Rightarrow$  marriage bars were lifted.
- Limited evidence on **short/long-run effects** of lifting marriage bars.

# Motivation

- Key barrier to women's LFP before 1950's: **“marriage bars”**
  - Widespread ban on employment of married women
  - Enforced by over half of surveyed firms in 1931 Goldin 1988
  - In 1950's, demand for labor rose  $\Rightarrow$  marriage bars were lifted.
- Limited evidence on **short/long-run effects** of lifting marriage bars.

# Motivation

- Key barrier to women's LFP before 1950's: **“marriage bars”**
  - Widespread ban on employment of married women
  - Enforced by over half of surveyed firms in 1931 Goldin 1988
  - In 1950's, demand for labor rose  $\Rightarrow$  marriage bars were lifted.

# Motivation

- Key barrier to women's LFP before 1950's: **“marriage bars”**
  - Widespread ban on employment of married women
  - Enforced by over half of surveyed firms in 1931 Goldin 1988
  - In 1950's, demand for labor rose  $\Rightarrow$  marriage bars were lifted.
- Limited evidence on **short/long-run effects** of lifting marriage bars.

# Research question

- **Question:** What were the effects of lifting marriage bars on...
  - Workforce composition? (Married women's LFP, substitution away from men)
  - Firm outcomes? (Productivity, wages)
  - Household outcomes? (Fertility, husband earnings and LFP)
- **Main empirical challenge:** Data.
  - Census earnings data begin in 1940.
  - Minimal documentation of marriage bar enforcement. Goldin 1988

# Research question

- **Question:** What were the effects of lifting marriage bars on...
  - Workforce composition? (Married women's LFP, substitution away from men)

# Our context: Teachers

- Teaching: key job for married, educated women ▶ Married Women in Teaching
  - In 1940: 31% of married women in labor force with any college were teachers.
  - In 2000: 12% of married women in labor force with any college were teachers.
- Marriage bars were **highly prevalent** in teaching.
  - 87% of school districts in 1942. Goldin 1988
- Ideal occupation for studying effects of married women entering labor force.
  - **Data:** Census + Historical school district records on salaries pre-1940.
  - **Identifying variation:** Staggered timing of marriage bars ending across states.

# Our context: Teachers

- Teaching: key job for married, educated women ▶ Married Women in Teaching

# Today's talk

## Preliminary findings

- *First stage*: Relative to nearby “control” states, states that lifted marriage bars saw **4.7 ppt** ↑ (21.7% ↑) **in share of married women teachers**.
- *Decomposition*: Increase driven by ↑ employment of **both** recently and non-recently married women
- *Household outcomes*: **No effect** on spouse's occupational income score

## Next steps

- Digitizing teacher salary data pre-1940.
- Effects of lifted marriage bars on school + household outcomes.

# Today's talk

## Preliminary findings

# Data

- Census:**
- Every 10 years (full-count, linked)
  - Occupation, earnings, gender, marital status, age at marriage

- State Superintendent Reports:**
- Every year
  - District-level teacher salaries, school spending, # students, rural/urban

# Outline

1. Introduction

2. Data and Context

3. Preliminary Results

- Effects on workforce composition

- Effects on household, firm outcomes (Work in progress)

4. Conclusion and Next Steps

# Overview: Effects on workforce composition

- ① **Main strategy:** Diff-in-diff.
- ② **Main estimates:** Treated states see 4.7 ppt  $\uparrow$  in share married women teachers, relative to control states.
  - No effect on share men teachers.
- ③ **Decomposition:** Increase driven by schools employing both women married *after* and *before* marriage bar is lifted.

# Overview: Effects on workforce composition

- ① **Main strategy:** Diff-in-diff.
- ② **Main estimates:** Treated states see 4.7 ppt  $\uparrow$  in share married women teachers, relative to control states.
  - No effect on share men teachers.
- ③ **Decomposition:** Increase driven by schools employing both women married *after* and *before* marriage bar is lifted.

# Overview: Effects on workforce composition

- ① **Main strategy:** Diff-in-diff.
- ② **Main estimates:** Treated states see 4.7 ppt  $\uparrow$  in share married women teachers, relative to control states.
  - No effect on share men teachers.
- ③ **Decomposition:** Increase driven by schools employing both women married *after* and *before* marriage bar is lifted.

# Overview: Effects on workforce composition

- ① **Main strategy:** Diff-in-diff.

  - No effect on share men teachers.
- ③ **Decomposition:** Increase driven by schools employing both women married *after* and *before* marriage bar is lifted.

# Strategy: Differences-in-differences design

Compare treated counties to control counties:

$$y_{ct} = \alpha_t + \beta_{s(c)} + \sum_{k \in \{1910, 1920, 1940\}} \gamma_k \times \text{Treat}_{s(c)} \times \text{Year}_{k=t} + \varepsilon_{ct}, \quad (1)$$

where for each county  $c$  and year  $t$ ,

- $\text{Treat}_{s(c)} = \mathbb{1}[s(c) \in \{\text{KY}, \text{NC}\}]$
- Outcome  $y_{ct}$ : Share teachers married women, unmarried women, men.

**Identifying assumption:** Parallel trends in  $y_{ct}$  prior to marriage bars being lifted.

# Strategy: Differences-in-differences design

Compare treated counties to control counties:

$$y_{ct} = \alpha_t + \beta_{s(c)} + \sum_{k \in \{1910, 1920, 1940\}} \gamma_k \times \text{Treat}_{s(c)} \times \text{Year}_{k=t} + \varepsilon_{ct}, \quad (1)$$

where for each county  $c$  and year  $t$ ,

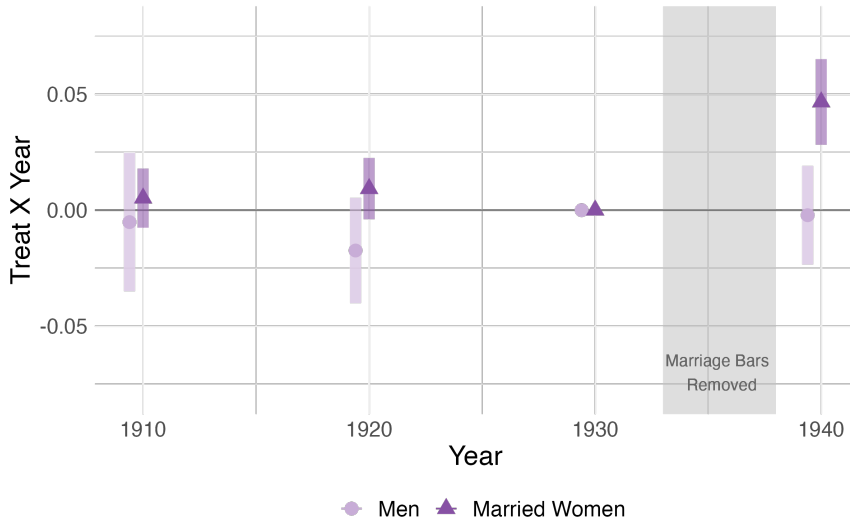

- $\text{Treat}_{s(c)} = \mathbb{1}[s(c) \in \{\text{KY}, \text{NC}\}]$
- Outcome  $y_{ct}$ : Share teachers married women, unmarried women, men.

**Identifying assumption:** Parallel trends in  $y_{ct}$  prior to marriage bars being lifted.

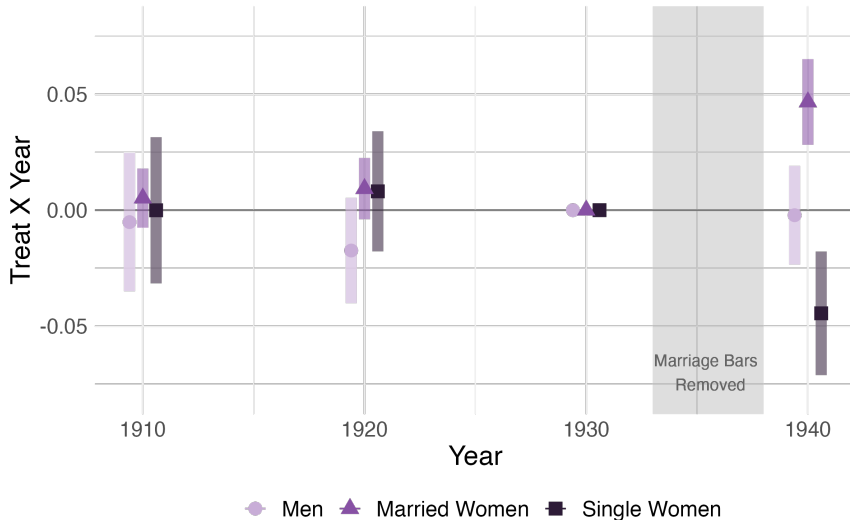

Result: Treated states see  $\uparrow$  in share married women teachers

# Result: Men are *not* pushed out by marriage bars being lifted

# Result: Men are *not* pushed out by marriage bars being lifted

## Illustrative example: Decomposing the main effect

- Consider NC, where marriage bar lifts in 1935.
- Married women teachers in 1940 fall into one of two groups:
- **Which group** drove overall  $\uparrow$  married women teachers in 1940 in NC (vs. SC)?
- **Strategy:** 2-period diff-in-diff with outcomes share teachers MB and share teachers MA

## Illustrative example: Decomposing the main effect

- Consider NC, where marriage bar lifts in 1935.
- Married women teachers in 1940 fall into one of two groups:

- Which group** drove overall  $\uparrow$  married women teachers in 1940 in NC (vs. SC)?
- Strategy:** 2-period diff-in-diff with outcomes share teachers MB and share teachers MA

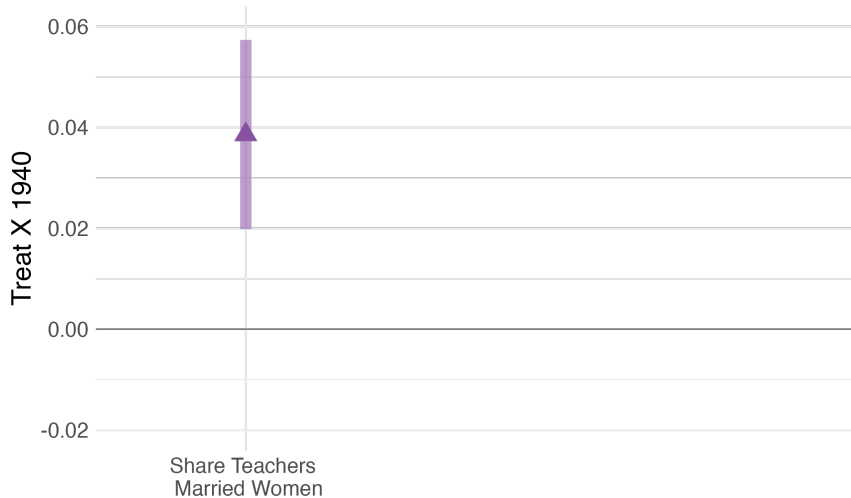

## Illustrative example: Decomposing the main effect

- Consider NC, where marriage bar lifts in 1935.
- Married women teachers in 1940 fall into one of two groups: Married **Before** (MB) and Married **After** (MA)
- **Which group** drove overall  $\uparrow$  married women teachers in 1940 in NC (vs. SC)?
- **Strategy:** 2-period diff-in-diff with outcomes share teachers MB and share teachers MA

## Illustrative example: Decomposing the main effect

3. Preliminary Results
4. Conclusion and Next Steps

# Conclusion and Next Steps

## This project so far

- What were the effects of lifting marriage bars in teaching on married women's LFP and households, and the teaching occupation?
- Preliminary findings:
  - Marriage bars “had bite”: Lifting bars caused  $\uparrow$  share married women teachers.
  - Increase driven by schools employing recently-married women.

## Next steps:

- Characterizing the married women employed after marriage bars are lifted.
- Digitizing teacher salary data pre-1940.
- Additional outcomes from superintendent reports: educational attainment, school funding

# Conclusion and Next Steps
